nov 2 2010 when reading list is a reference to the original list and list shallow copies the list when assigning list re binds the name and list slice assigns replacing what was previously in the list

the first is creating a slice normally often used for getting just part of a list which happens to contain the entire list and thus is effectively a copy of the list the second list is using the actual

i have a piece of code here that is supposed to return the least common element in a list of elements ordered by commonality def

getsingle arr from collections import counter c counte

in notepad is there a way to show the list of files that are currently open in a list on the left instead of using the default tab view i  
d like it to resemble the way textpad shows the file

nov 1 2011 how can i check if a list has any duplicates and return a new list without duplicates

if you re having trouble accessing a google product there s a chance we re currently experiencing a temporary problem you can  
check for outages and downtime on the google workspace status

feb 2 2013 can we have list comprehension without a for loop and just if else to put a single default value inside the list and  
later extend it if required i e result hello if x 1

the notation list means a list of something but i m not saying what since the code in test works for any kind of object in the list  
this works as a formal method parameter using a type parameter

oct 5 2012 by using a colon in the list index you are asking for a slice which is always another list in python you can assign  
values to both an individual item in a list and to a slice of the list

the first way works for a list or a string the second way only works for a list because slice assignment isn t allowed for strings  
other than that i think the only difference is speed it looks like it s a little
